Comments on market performance

- The gradual reopening of economies, large stimulus packages and growing hope for a new vaccine led to a strong rebound for the main stock markets around the world. The initial data on the global economy suggest a quicker recovery than expected.
- The upsurge in COVID-19 cases at the end of the quarter especially in the United States may nonetheless slow down economic recovery at the end of the quarter. The pandemic is currently the primary source of uncertainty on the financial markets, and there is every reason to believe that it will take several years before the economic environment returns to normal.
- Like many other countries around the globe, Canada experienced one of the worst recessions in its history, prompting one of the U.S. credit rating agencies to lower its rating. However, we should see the Canadian economy start to recover in May as lockdown measures are lifted. This was followed by a significant increase in the Canadian stock market fuelled in part by a sharp increase in the materials and technology sectors.
- In the United States, the technology sector contributed substantially to the best quarterly performance for the U.S. stock market in more than two decades. Furthermore, the U.S. Federal Reserve remains committed to using all the tools at its disposal to support the economy. Low interest rates and securities purchasing should continue for a while.
- The first country affected by the pandemic, China, was also one of the first economies to recover. Industrial production has already recovered to almost the same level as before the crisis. However, relations between China and a number of countries, including the United States, have deteriorated as a result of the coming into force of the national security act imposed by the Chinese regime on Hong Kong and the crackdown on demonstrators there.
- The Canadian dollar appreciated against most international currencies. Compared to the U.S. dollar, the value of the Canadian dollar increased by 4.5% over the quarter, decreasing the value of assets denominated in foreign currencies.

Portfolio performance (A-Class) as of June 30, 2020

	3 months	1 year	3 years	5 years	10 years	Since start of operations	Start date of operations
Chorus II Growth	12.15	4.71	4.12	4.19	–	6.13	2011/11/28
Chorus II Aggressive Growth	13.31	4.14	4.13	4.39	–	6.95	2011/11/28

Comments on portfolio performance as of June 30, 2020

Fixed Income (A-Class return)

- During the quarter, the Canadian and global bond funds posted returns of between 4.25% and 11.74%.
- All income funds, both Canadian and foreign, contributed positively to the return for growth portfolios.
- The Canadian dollar's appreciation compared to foreign currencies (US\$, Euro, Pound, Yen) was beneficial for foreign bonds denominated in Canadian dollars (hedging of exchange rate risk).
- The level of liquidity for bond securities recovered, driven by global central bank policies. Also, a tightening in credit spreads was beneficial for a wide range of corporate bonds.
- The Canadian Bond (29th percentile) and Enhanced Bond (15th percentile) funds contributed between 10% and 20% of the total portfolio performance and are among the best in their respective classes.
- The contribution by foreign bond funds is less significant. We highlight the performance of the Emerging Market Bond and Global Corporate Bond funds, which increased by 11.74% and 7.98%.

Growth (A-Class return)

- Growth-dedicated assets, including equity funds, all posted positive returns varying from 7.72% to 33.51%.
- The Global Equity Growth (22.41%) and American Equity Growth (26.32%) funds were the largest contributors to growth portfolio returns over the quarter.
- The spectacular appreciation of Canadian Small Cap Equity (32.95%) and Overseas Equity Growth (33.51%) Funds during the quarter are worth noting.
- The performance of the Overseas Equity Growth Fund is the top of its class (1st percentile).
- The Canadian equity category is back on track with the recovery of the energy sector and the marked contribution by the materials and discretionary consumption sectors.
- The *style factors* that had the greatest impact on the portfolios are **small capitalization** (*in Canada*) and **growth** (*in Canada/U.S.*) for developed markets and **momentum** for emerging markets.

Contribution to portfolio performance (A-Class) as of June 30, 2020

Chorus II Aggressive Growth	++	+++	-
Chorus II Maximum Growth	++	+++	-
Chorus II 100% Equity Growth	In accordance with the legislation in effect, information regarding returns may not be published for funds that are less than one year old.		

Comments on portfolio tactical asset allocation as of June 30, 2020

- For the quarter, Lazard Asset Management's tactical interventions generated a slight decrease in value compared with neutral allocations.
- The manager maintained their conservative position, preferring longer-term Canadian bonds and quality global bond securities over emerging country securities and those from sectors sensitive to economic cycles.
- At the beginning of April, the manager adjusted their forecast by increasing exposure to global small cap equity and reducing Canadian bonds. This decision was based on the U.S. Congress' stimulus package, aimed at small and medium-sized businesses. It should be noted that this decision was profitable for investors.
